A BETTER WAY TO LEARN TOGETHER

# Your skills can help someone else grow.

Meet thoughtful learning partners. Teach what you know, learn what you don't, and make progress side by side.

Find your people →  See how it works ↓

AM SK MC +  **A community built on reciprocity**
Good things happen when we learn together.

**One good conversation**
can unlock a new skill.

**Teach what you know**
and learn what you're curious about.

**Find your next person**
through shared interests and goals.

LEARNING, MADE HUMAN

## Better together, by design.

A little structure makes it easier to find the right person and start a great learning exchange.

**AM** Alex Morgan — Computer Science Student — Suggested for you

Interested in backend development and AI. I love building small projects with other learners.

CAN TEACH: Java, Spring Boot, MySQL

WANTS TO LEARN: Python, Machine Learning

Evenings — View profile — Connect

**SK** Samira Khan — Data Science Student — Suggested for you

Data science student exploring the intersection of statistics and thoughtful product design.

CAN TEACH: Python, Statistics, Pandas

WANTS TO LEARN: SQL, React

Weekends — View profile — Connect

**RM** Rohan Mehta — Software Developer — Suggested for you

Frontend engineer who enjoys explaining React patterns and learning cloud architecture.

CAN TEACH: React, Node.js, TypeScript

WANTS TO LEARN: Java, Cloud

Weekday mornings — View profile — Requested

**MC** Maya Chen — Machine Learning Engineer — Suggested for you

ML engineer and patient mentor. Currently curious about systems design and developer tools.

CAN TEACH: Machine Learning, Python, NLP

WANTS TO LEARN: System Design, Rust

Evenings — View profile — Connect

**NW** Noah Williams — Product Designer — Suggested for you

Designing inclusive digital products. Looking to pair with engineers on creative side projects.

CAN TEACH: Figma, Design systems, UX research

WANTS TO LEARN: React, Accessibility

Weekends — View profile — Message

Partner suggestions consider complementary skills, shared interests and your learning goals.

A SMALL PLAN FOR YOUR NEXT BIG IDEA

# Your skill development

A simple view of what you're curious about and where a peer could help.

Edit your goals

YOUR LEARNING GOAL

## Become a Machine Learning Engineer

Built from the skills you want to learn. Your plan grows when you do.

IN PROGRESS

YOUR LEARNING LIST

## Skills to explore

3

**Machine Learning**
A peer can help you get hands-on practice and build confidence.
On your list

**Python**
Look for a learning partner who can share a useful starting point.
Ready to explore

**NLP**
Keep this goal visible and revisit it as your interests grow.
Just getting started

A GOOD NEXT STEP

### Learn it with someone.

Learning alongside a peer can help turn a new concept into something you can use.

Find a partner

Skill suggestions reflect your profile goals. They are not an assessment of your ability.

**Small steps, real progress.**
Learning gets easier when you do it together.

RECOMMENDATION PIPELINE

# How ESCO enriches a recommendation

SkillSync AI ranks peers first. ESCO adds optional career context to the explanation; it does not choose matches or set their scores.

1

### Learner signals

Read active profiles, teach/learn skills, interests, and prior connection or recommendation history.

2

### Match and rank

The matching service scores complementary peer profiles and writes a plain-language explanation.

3

### Look up a skill

For selected matched skills, search ESCO skill concepts and inspect essential/optional occupation relations.

4

### Add context

Append up to three related occupation titles to the recommendation explanation, with ESCO attribution.

5

### Save and show

Send scored results to Spring Boot. The backend stores them; React displays the match and explanation.

### Designed to fail open

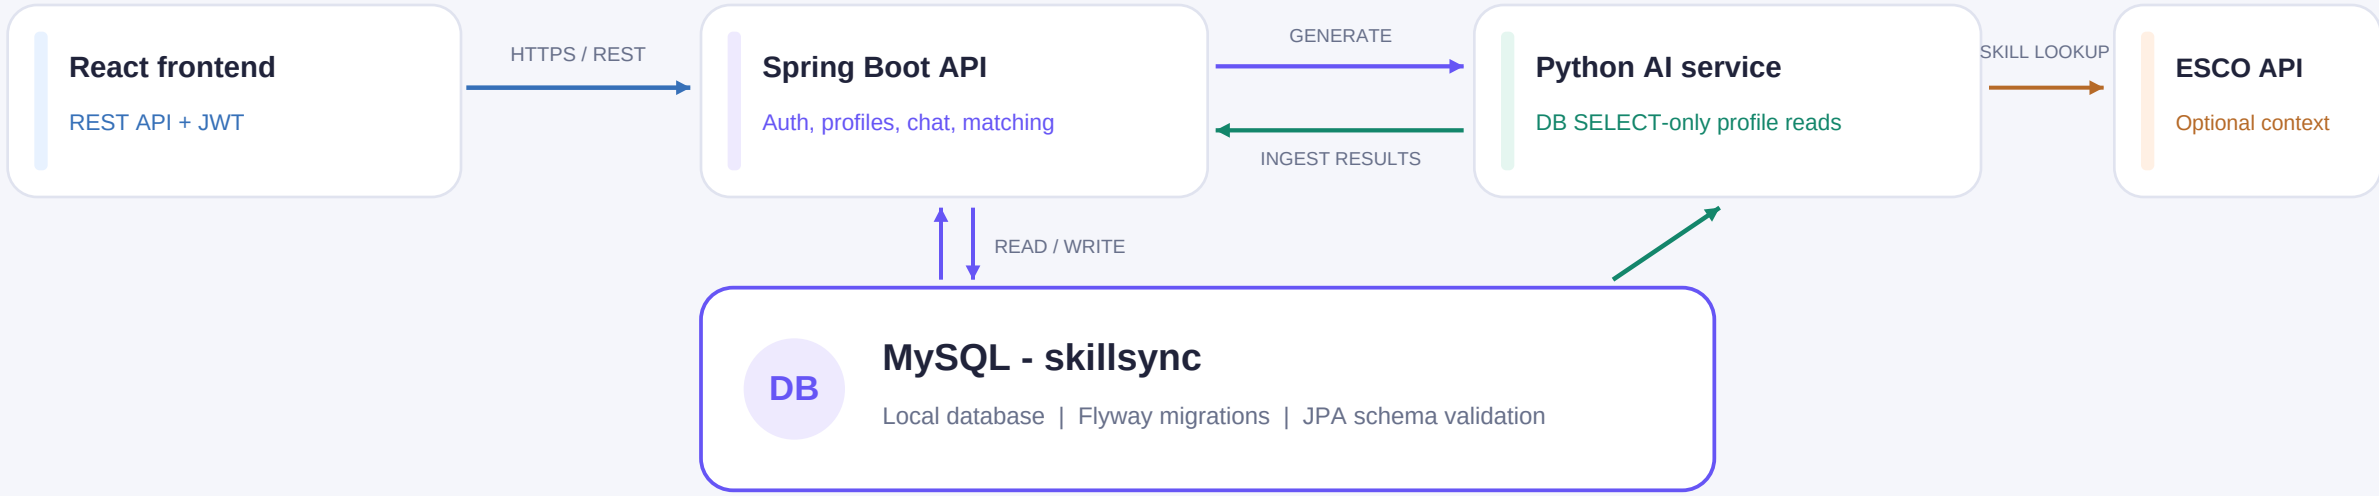

If ESCO is unavailable or has no matching concept, the peer recommendation and its score remain usable.

ESCO OPTIONAL | UP TO 3 SKILL LOOKUPS | MAX 5 SECOND TIMEOUT | 24H SUCCESS CACHE | 60S FAILURE CACHE

SYSTEM AND DATA

# SkillSync database architecture

The browser calls Spring Boot. Spring Boot owns application writes; the AI service reads a limited profile dataset and submits recommendations back through the backend.

### IDENTITY AND SKILLS

**users | skills**
**user_skills | user_interests**

user_skills joins learners to catalog skills.

### PEER WORKFLOW

**connections | recommendations**
**recommendation_feedback**

Connections and recommendations each link two users.

### MESSAGING

**conversations | conversation_participants**
**messages**

Participants join users to conversations; messages store sender and time.

Passwords are stored as hashes. AI account reads profile and match tables; recommendation writes go through Spring Boot.
